NOTES

Chapter 1

Getting Started

In stores where counter space is at a premium, the Magellan™ 800i Omni-Directional Imaging Scanner maintains an aggressive scan zone that is necessarily tight against the scanner's face. Scanning methods include a mixture of sweep and presentation styles, offering hands-free scanning for small, easily handled items and handheld scanning for bulkier objects.

About This Manual

This manual presents advanced user information which includes connection, programming, product and cable specifications, and other useful references. For additional information, such as installation, maintenance, troubleshooting and warranty information, see the Quick Reference Guide (QRG). Copies of other publications for this product are downloadable free of charge from the website listed on the back cover of this manual.

On leaving the factory, units are programmed for the most common terminal and communications settings. If you need to change these settings, custom programming can be accomplished by scanning the bar codes in this guide.

Bold text and a yellow-highlighted background indicates the most common default setting for a feature/option.

Manual Conventions

The symbols listed below are used in this manual to notify the reader of key issues or procedures that must be observed when using the scanner:

NOTE

Notes contain information necessary for properly diagnosing, repairing and operating the scanner.

CAUTION

The CAUTION symbol advises you of actions that could damage equipment or property.

Connecting the Scanner

The scanner kit you ordered to match your interface should provide a compatible cable for your installation. Use the appropriate instructions below to connect the scanner to the terminal, PC or other host device.

Upon completing the connection via the appropriate interface instructions below, proceed to the [Interface Related Features](#) section of this manual and scan the bar code to select the correct interface type.

RS-232 Serial Connection — Turn off power to the terminal/PC and connect the scanner to the terminal/PC serial port via the RS-232 cable as shown in [Figure 1](#). If the terminal will not support POT (Power Off the Terminal) to supply scanner power, use the approved power supply (AC Adapter). Plug the AC Adapter barrel connector into the socket on the RS-232 cable connector and the AC Adapter plug into a standard power outlet.

Figure 1. RS-232 Serial Connection using A/C Adapter

USB Connection — Connect the scanner to a USB port on the terminal/PC using the correct USB cable for the interface type you ordered. Reference [Figure 2](#).

Figure 2. USB Connection

Programming

The scanner is typically factory-configured with a set of default features standard to the interface type you ordered. After scanning the interface bar code from the [Interface Related Features](#) section, you can select other options and customize your scanner through use of the instructions and programming bar codes available in that section and also the [Data Editing](#) and [Symbologies](#) chapters of this manual.

Using the Programming Bar Codes

This manual contains feature descriptions and bar codes which allow you to reconfigure your scanner. Some programming bar code labels, like the label below for resetting defaults, require only the scan of that single label to enact the change. Most of the programming labels in this manual, however, require the scanner to be placed in Programming Mode prior to scanning them. Scan a START/END bar code once to enter Programming Mode. Once the scanner is in Programming Mode, you can scan a number of parameter settings before scanning the START/END bar code a second time, which will then accept your changes, exit Programming Mode and return the scanner to normal operation.

Resetting the Standard Product Defaults

If you are unsure of what programming options are in your scanner, or you've changed some options and want the factory settings restored, scan the *Standard Product Default Settings* bar code below. This will copy the factory configuration for the currently active interface to the current configuration.

Standard Product Default Settings

The programming section lists the factory default settings for each of the menu commands for the standard RS-232 interface in **BOLD** text on the following pages. Exceptions to default settings for the other interfaces can be found in [Appendix D, Default Settings](#).

LED and Beeper Indicators

The scanner's beeper sounds and its green LED illuminates to indicate various functions or errors on the scanner. The tables below list these indications. One exception to the behaviors listed in the tables is that the scanner's functions are programmable, and may or may not be turned on. For example, certain indications, such as the power-up beep can be disabled using programming bar code labels.

Green LED Indications

LED INDICATION	INDICATION	COMMENT
Power-on indication	Bright green flash	Indicates the scanner has finished all its power up tests and is now ready for operation.
Good Read Indication	Bright green flash	Indicates a bar code has been read and decoded.
Scanner Ready	Constant dim green	The scanner is ready for operation.
Sleep Mode	Constant green flash (100mS on, 1900mS off)	The scanner is in Sleep Mode. To wake the scanner up, move an object in front of its window.
Host Disable	Constant green flash at 1 Hz (100mS on, 900mS off)	The scanner is disabled due to receiving a disable command from the POS terminal.
Diagnostics	Varies (see Error Codes on page 5 for more information)	The LED can provide diagnostic feedback if the scanner discovers a problem during SelfTest.
Prog. Mode	See Host Disable above.	The scanner is in Programming Mode.

BEEPER FUNCTIONS

BEEPER INDICATION	INDICATION	COMMENT
Power On Beep	Single beep	The Power-On LED indication is a configurable feature which can be enabled or disabled. When enabled, this beep indicates the scanner has finished all its power up tests and is now ready for operation.
Good Read Indication	Single beep	The good read beep indication is configurable. Options include: Enable/disable, frequency, duration and volume. See the "LED and Beeper Indicators" section on page 12 for more information.
Diagnostics	Varies (see Error Codes on page 5 for more information)	The Beeper can provide diagnostic feedback if the scanner discovers a problem during SelfTest.
Programming Mode Indications	Varies depending upon the feature(s) being configured.	The Beeper will sound as programming bar code labels are scanned, indicating progress during scanner configuration.

Error Codes

Upon startup, if the scanner flashes its indicator LED or sounds an unexpected series of beep tones (other than normal power-up indications), this means the scanner has not passed its automatic Selftest and has entered FRU¹ isolation mode. If the scanner is reset or the trigger is pulled, the sequence will be repeated. The following table describes the LED flashes/beep codes associated with an error found.

NUMBER OF LED FLASHES/ BEEPS	ERROR	CORRECTIVE ACTION
1	Configuration	Contact Helpdesk for assistance
2	Interface	
6	System Controller	
12	Imager System	
13	Software ID Failure	

1. Field Replaceable Unit (FRU)

0.7 Second	
	0.8 Second
0.9 Second	
	1 Second

Double Read Queue

This feature controls the number of labels stored within the Double Read Timeout setting. This setting applies to Linear and 2D labels.

NOTE

Setting this feature to 'one' may allow the reading of adjacent bar code labels within the scanner's field of view.

START / END	
PROGRAMMING BAR CODES	
Double Read Queue = Seven DEFAULT	
	Double Read Queue = One

Double Read Timeout for 2D Labels

This Double Read Timeout feature specifies the minimum allowable time between consecutive good reads of the same PDF 417, Micro PDF 417 Data Matrix, QR Code, Maxicode, Aztec or Composite label.

	START / END
PROGRAMMING BAR CODES	
	20 mSec

Disables or enables the indication (a single beep) that the scanner has finished all its power up tests and is now ready for operation.

	START / END
PROGRAMMING BAR CODES	
Disable	
	Enable DEFAULT

ERI Active State High

This setting specifies the active-state polarity of the External Read Indicator signal to High; the inactive state is the opposite polarity.

START / END	
PROGRAMMING BAR CODES	
ERI Active State = Low	
	ERI Active State = High DEFAULT

ERI Timeout

Specifies the amount of time the External Read Indicator (ERI) signal is held active for a good read.

START / END	
PROGRAMMING BAR CODES	
<p>Sets the ERI timeout duration using hex values from 000 to 255 in increments of ten milliseconds (10ms or 0.01 seconds). To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ERI Timeout,” followed by the two digits (zero padded) from the Alphanumeric table in Appendix C, Alphanumeric Pad representing the desired time value. Exit programming mode by scanning the “START/END” bar code again.</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 20 milliseconds (02)</p>	
	Set ERI Timeout

Good Read: When to Indicate

This feature specifies when the scanner will provide indication (beep and/or flash its green LED) upon successfully reading a bar code. Choices are:

- Good Read = Indicate after decode
- Good Read = Indicate after transmit
- Good Read = Indicate after CTS goes inactive, then active

This option (Indicate after CTS goes inactive, then active), which uses CTS, is only valid for RS-232 interfaces. If set to this mode in other interfaces, “Indicate after decode” mode will be assumed. This setting will only work if CTS Scan control is enabled.

NOTE

- Good Read = Beep after each output structure proofed

When beeping after each output structure decoded, if multiple output structures, there is a delay after the beep has finished. The delay is equal to the good beep length or can be set by a ULE script.

NOTE

	START / END
PROGRAMMING BAR CODES	
After Decode DEFAULT	
	After Transmit
After CTS goes inactive, then active	
	Beep after each output structure proofed

Good Read Beep Control

This feature enables/disables the scanner's ability to beep upon a successful decode of a bar code.

		START / END
PROGRAMMING BAR CODES		
Disable		
	Enable DEFAULT	

Good Read Beep Frequency

Adjusts the good read beep to sound at a selectable low, medium or high frequency, selectable from the list below. (Controls the beeper's pitch/tone.)

		START / END
PROGRAMMING BAR CODES		
Low		
	Medium DEFAULT	
High		

Good Read Beep Length

Specifies the duration of a good read beep.

50%	
	60%
70%	
	80%

Image Capture

Image capture requires that the scanner use the Standard RS-232 or USB COM interface **ONLY**.

NOTE

The scanner reverts to normal reading mode after image capture and transfer.

How to Capture an Image

By default, images are captured as 640 x 480 (VGA) format with a minimum compression ratio, and are displayed via the host application software. There are two methods of capturing images as discussed below:

- [Image Capture by Scanning a Special label](#)
- [Image Capture to the Host by Host Command](#)

Image Capture by Scanning a Special label

To initiate an Image Capture, scan the IMAGE CAPTURE label below.

Upon scanning this label, the scanner's beeper will sound a "chirp" sequence and its LED's will flash rapidly for a time (nominally five seconds). At the end of this time, the scanner will capture the image and sound a rapid beep series. The scanner's LED's will then flash more slowly while data is being transmitted to the host. The beeper will then sound a final series of beeps to indicate the capture process is complete.

Image Capture to the Host by Host Command

Image Capture is also available through Host commands. Refer to [Appendix F, Host Commands](#) for more information.

Image Compression

Specifies the starting image compression factor for JPEG images. A higher number specifies a higher quality image with less compression than a relative lower number for the same image.

A value of 100 means minimal compression. A value of 1 means maximum compression at a loss of quality. Follow these steps to program this feature:

1. Scan the START bar code.
2. Scan the Set Image Compression bar code.
3. Turn to [Alphanumeric Pad](#) and scan the two digits (zero-padded) representing the desired compression. The configurable range is 01-0x64 by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING BAR CODES	
	Image Compression = 30 (higher compression — lower quality)
Image Compression = 50 (medium compression — medium quality)	
	Image Compression = 100 (minimal compression — higher quality) DEFAULT

Image Brightness

This feature sets the image brightness value. Follow these instructions to configure this feature:

1. Scan the START bar code.
2. Scan the Set Image Brightness bar code.
3. Turn to [Alphanumeric Pad](#) and scan the two digits (zero-padded) representing the desired brightness in decimal notation. The configurable range is 00-0x0A by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING BAR CODES	
	Set Image Brightness DEFAULT SETTING FOR THIS FEATURE: 00

Image Contrast

This feature sets the image contrast value. Follow these instructions to configure this feature:

1. Scan the START bar code.
2. Scan the Set Image Contrast bar code.
3. Turn to [Alphanumeric Pad](#) and scan the two digits (zero-padded) representing the desired contrast in decimal notation. The configurable range is 00-0x0A by increments of 01.
4. Scan the END bar code.

START / END	
PROGRAMMING BAR CODES	
	Set Image Contrast DEFAULT SETTING FOR THIS FEATURE: 00

Cell Phone Mode

Cell phone mode is when the scanner is enabled to read barcodes on a cell phone display. This mode is set as follows:

- Disabled - No cell phone mode
- Auto - Will automatically go to cell phone mode
- Manual - Will go to cell phone mode on receiving a command from the host. See [Appendix F, Host Commands](#) for more information regarding this feature.

START / END	
PROGRAMMING BAR CODES	
	Cell Phone Mode = Disable DEFAULT
Cell Phone Mode = Auto	
	Cell Phone Mode = Manual

Cell Phone Mode Sensitivity

When Cell Phone Mode is configured for “Auto” for a scanner, it will go into cell phone mode based on what is seen in its field of view. (The illumination LED’s will “flutter” slightly when entering cell phone mode.) By default, medium sensitivity is selected. If the scanner is going into cell phone mode more often than the user would like, the scanner can be set to low sensitivity by scanning the low sensitivity programming labels on the following page. If the scanner does not seem to go into cell phone mode often enough, the scanner can be set to high sensitivity by scanning the high sensitivity programming labels.

START / END

PROGRAMMING BAR CODES

Cell Phone Mode Sensitivity = Low Sensitivity
SCAN ALL THREE BAR CODES

Cell Phone Mode Sensitivity = Medium Sensitivity
DEFAULT
SCAN ALL THREE BARCODES

Cell Phone Mode Sensitivity = High Sensitivity
SCAN ALL THREE BARCODES

Interface Related Features

At the time of this writing, the reader supports the interfaces listed in [Table 1](#). Select the desired interface type from the table, then reference the page number given for the customizable features section associated with each interface.

Table 1. Interfaces Supported

RS-232

RS-232 Standard

RS-232 Wincor-Nixdorf

USB

USB-OEM

USB Keyboard

USB COM

USB TEC

The correct interface cable is included for the reader interface type you ordered.

NOTE

	RS-232 Standard
RS-232 Wincor-Nixdorf	
	USB-OEM
USB Keyboard	
	USB COM
USB TEC	

NOTE

Interface-specific settings are only valid for the active interface.

Interface Features

Obey/Ignore Host Commands

When set to ignore host commands, the scanner will ignore all host commands except for the minimum set necessary to keep the interface active and transmit labels. For normal operation of the interface, select Obey Host Commands.

START / END	
PROGRAMMING BAR CODES	
	Obey Host Commands DEFAULT
Ignore Host Commands	

Interface Features — cont.

Host Transmission Buffers

Specifies the number of host transmission(s) that may be buffered. By buffering data from a bar code, the scanner can continue to read a new bar code while the old one is being transmitted to the host. Selecting BUFFERS = 1 means that the first bar code must be transmitted before a new one can be read. A selection of BUFFERS = 2 means that a new bar code can be read while data from the first bar code is transmitted.

When a DISABLE SCANNER command is received from the host, the scanner will continue to transmit all data that is buffered.

START / END	
PROGRAMMING BAR CODES	
	Host Transmission Buffers = 1

2 Stop Bits	
	Parity = None DEFAULT
Parity = Even	
	Parity = Odd

RS-232 Interface Features — cont.

Hardware Flow Control

Disable Hardware Control — The scanner transmits to the host regardless of any activity on the CTS line.

Enable CTS Flow Control — The CTS signal controls transmission of data to the host.

Enable CTS Scan Control — The CTS line must be active for the scanner to read and transmit data. While the CTS line is inactive, the scanner remains in a host-disabled state; following a successful label transmission, the CTS signal must transition to inactive and then to active to enable scanning for the next label.

Enable CTS Scan Control - No Toggle — This feature works the same as CTS scan control, except the CTS toggle at the end of transmission is not required.

START / END	
PROGRAMMING BAR CODES	
	Disable Hardware Control DEFAULT
Enable CTS Flow Control	
	Enable CTS Scan Control
Enable CTS Scan Control - No Toggle	

RS-232 Interface Features – cont.

Intercharacter Delay

Specifies a delay between the end of one character and the beginning of the next in 10-millisecond increments. This delay is inserted after each data character transmitted. If the transmission speed is too high, the system may not be able to receive all characters. You may need to adjust the delay to make the system work properly.

START / END	
PROGRAMMING BAR CODES	
	Inter-Char Delay = No Delay DEFAULT
Interchar Delay = 10 msec	
	Interchar Delay = 20 msec
Interchar Delay = 30 msec	
	Interchar Delay = 40 msec
Interchar Delay = 50 msec	
	Interchar Delay = 60 msec

Intercharacter Delay – cont.

START / END	
PROGRAMMING BAR CODES	
	Interchar Delay = 80 msec
Interchar Delay = 90 msec	

Software Flow Control

Disables/Enables software control using XON/XOFF characters.

START / END	
PROGRAMMING BAR CODES	
	Disable Software Flow Control DEFAULT
Enable Software Flow Control	

RS-232 Interface Features – cont.

Beep on ASCII BEL

Enables/disables ability of scanner to beep (sound a good read tone) on receiving an ASCII BEL (07 hex).

START / END	
PROGRAMMING BAR CODES	
	Disable Beep on ASCII BEL DEFAULT
Enable Beep on ASCII BEL	

Beep on Not on File

Enables the scanner to cause beep to be sounded on receiving not-on-file (NOF) command.

START / END	
PROGRAMMING BAR CODES	
	Beep on Not On File = Disable
Beep on Not On File = Low Volume DEFAULT	
	Beep on Not On File = Medium Volume
Beep on Not On File = High Volume	

ACK NAK Options

This enables/disables the ability of the scanner to support the RS-232 ACK NAK protocol. When configured, the scanner and/or host sends an “ACK” when it receives data properly, and sends “NAK” when the data is in error. Selections for this option are:

- Disable
- Enable for label transmission — the scanner expects an ACK/NAK response from the host when a label is sent
- Enable for host-command acknowledge — the scanner will respond with ACK NAK when the host sends a command
- Enable for label transmission and host-command acknowledge

START / END	
PROGRAMMING BAR CODES	
	Disable ACK NAK DEFAULT
Enable ACK NAK for Transmission	
	Enable ACK NAK for host command acknowledge
Enable ACK NAK for transmission and host command acknowledge	

RS-232 Interface Features – cont.

ACK Character

NOTE

Setting to previously defined characters such as XON, XOFF, or host commands conflicts with normal operation of these characters; 8-bit data is not recognized when the Number of Data Bits = 7 ASCII characters or any hex value from 0 to FF.

START / END	
PROGRAMMING BAR CODES	
<p>Sets the ACK character from the set of ASCII characters or any decimal value from 000 to 255. Pad entries of less than three digits with zeros, as in "005". To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set ACK Character," followed by the digits from the Alphanumeric table in Appendix C, Alphanumeric Pad representing your desired character. Exit programming mode by again scanning the "START/END" bar code above.</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 006</p>	
	Set ACK Character

NAK Character

NOTE

	Set NAK Character

RS-232 Interface Features — cont.

Retry on ACK NAK Timeout

Specifies the action the scanner performs after the configurable ACK NAK Timeout Value (set in the following feature) has expired.

START / END	
PROGRAMMING BAR CODES	
	Disable Retry on ACK NAK Timeout (Transmission failure occurs)
Enable Retry on ACK NAK Timeout DEFAULT	

ACK NAK Timeout Value

START / END	
PROGRAMMING BAR CODES	
<p>This item specifies the time the scanner will wait for an ACK character from the host following a label transmission. 00 = Infinite timeout 01 - 75 = Timeout in 200-millisecond increments To configure this feature, scan the "START/END" bar code above to place the unit in Programming Mode, then the "Set ACK NAK Timeout Value," followed by the two digits (zero padded) from the Alphanumeric table in Appendix C, Alphanumeric Pad representing your desired value. Exit programming mode by again scanning the "START/END" bar code above.</p> <p style="text-align: center;">DEFAULT SETTING FOR THIS FEATURE: 01 (200 msec)</p>	
	Set ACK NAK Timeout Value

RS-232 Interface Features – cont.

ACK NAK Retry Count

START / END

PROGRAMMING BAR CODES

This feature sets the number of times for the scanner to retry a label transmission under a retry condition.

000 = No retry

001 - 254 = Retry for the specified number of times

255 = Retry forever

To configure this feature, scan the “START/END” bar code above to place the unit in Programming Mode, then the “Set ACK NAK Retry Count,” followed by the three digits (zero padded) from the Alphanumeric table in [Appendix C, Alphanumeric Pad](#) representing your desired retry count. Exit programming mode by again scanning the “START/END” bar code above

DEFAULT SETTING FOR THIS FEATURE: 003

Set ACK NAK Timeout Value

RS-232 Interface Features — cont.

ACK NAK Error Handling

This item specifies the method the scanner will use to handle errors detected while waiting to receive the ACK character from the host. Errors include unrecognized host commands and communication errors such as parity or framing errors. Choices are:

00 = Ignore errors detected (recommended setting)

01 = Process error as valid ACK character (risk of lost label data)

02 = Process error as valid NAK character (risk of duplicate label data)

START / END	
PROGRAMMING BAR CODES	
	Ignore Errors Detected DEFAULT
Process error as valid ACK character	
	Process error as valid NAK character

RS-232 Interface Features – cont.

Transmission Failure Indication

Enables/disables bad-label indication upon transmission failure.

START / END	
PROGRAMMING BAR CODES	
	Disable Transmission Error Indication
Enable Transmission Error Indication DEFAULT	

USB-OEM Interface Features

USB-OEM Device usage

The USB-OEM protocol allows for the scanner to be identified as one of two different types of bar code scanners. Changing this value from the factory setting may be necessary when connecting two of the same scanner type to a POS system.

Options are:

- Table Top Scanner
- Handheld Scanner

START / END	
PROGRAMMING BAR CODES	
	Configure as Table Top Scanner DEFAULT
Configure as Handheld Scanner	

USB Keyboard

As a USB keyboard interface, the scanner supports most popular PCs and IBM terminals. The installation is a fairly simple process that doesn't require any changes of software or hardware.

Keyboard Layout

The Keyboard Layout option supports many countries. For details about Keyboard Layout, please refer to your operating system manual.

Caps Lock State

Choices are:

CAPS LOCK Off – send character data in normal format

CAPS LOCK ON – send character data in reverse case.

SHIFT-LOCK MODE – send character data in shifted case. This only applies to Wedge G. For other interface this setting results in a CAPS LOCK Off functionality.

CAPS LOCK COMPENSATION MODE – Preserves the case of the character data by detecting the state of the CAPS LOCK.

START / END	
PROGRAMMING BAR CODES	
	Caps Lock State = Caps Lock Off DEFAULT
Caps Lock State = ON	
	Caps Lock State = Caps Lock Compensation Mode

USB Keyboard – cont.

Control Characters

Affects suffix and prefix characters. When disabled, only ASCII characters between 20H and 127H inclusive (space... delete) plus special characters 0DH (carriage return), 08H (backspace), 27H (ESC), 09H (right tab) and 0BH (left tab) are transmitted.

Choices are:

- Disable Control Characters
- Enable transmission of control characters to host
- Send characters between 00H and 1FH according to a special function-key mapping table. (This is used to send keys that are not in the normal ASCII set; a unique set is provided for each available scancode set. Reference [Appendix E, USB Keyboard Function Key Mappings.](#))

USB COM Interface Set-up

To set the reader to use the USB Com interface, follow these instructions:

1. Download and install the USB Com driver available from the www.datalogic.com website.
2. Program the reader for the USB Com interface using the bar code located on [page 26](#).
3. Plug and play.

Chapter 4

Data Editing

Data Editing Overview

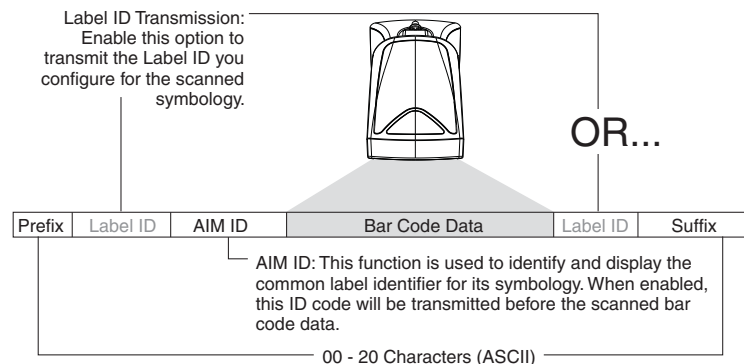

CAUTION

These features are not supported by the USB-OEM interface.

When a bar code is scanned, additional information can be sent to the host computer along with the bar code data. This combination of bar code data and supplementary user-defined data is called a “message string.” The features in this chapter can be used to build specific user-defined data into a message string.

There are several types of selectable data characters that can be sent before and after scanned data. You can specify if they should be sent with all symbologies, or only with specific symbologies. [Figure 5](#) shows the available elements you can add to a message string:

Figure 5. Breakdown of a Message String

Please Keep In Mind...

- Modifying a message string is not a mandatory requirement. Data editing is sophisticated feature allowing highly customizable output for advanced users. Factory default settings for data editing is typically set to NONE.
- A prefix or suffix may be applied (reference the [Symbologies](#) chapter for these settings) across all symbologies (set via the Global features in this chapter).
- You can add any character from the [ASCII Chart](#) (from 00-7F) on the inside back cover of this manual as a prefix, suffix or Label ID.
- Enter prefixes and suffixes in the order in which you want them to appear on the output.

Global Prefix/Suffix

START / END

Reference the section, Global Prefix/Suffix on page 154, for more information. Exit programming mode by scanning the “START/END” bar code again (scan “START/END” twice if less than 20 characters have been selected).</p> <p style="text-align: center;">DEFAULT SETTING PREFIX: 00 (None) DEFAULT SETTING SUFFIX: 0D (CR)</p>	
	Set Prefix
Set Suffix	

AIM ID

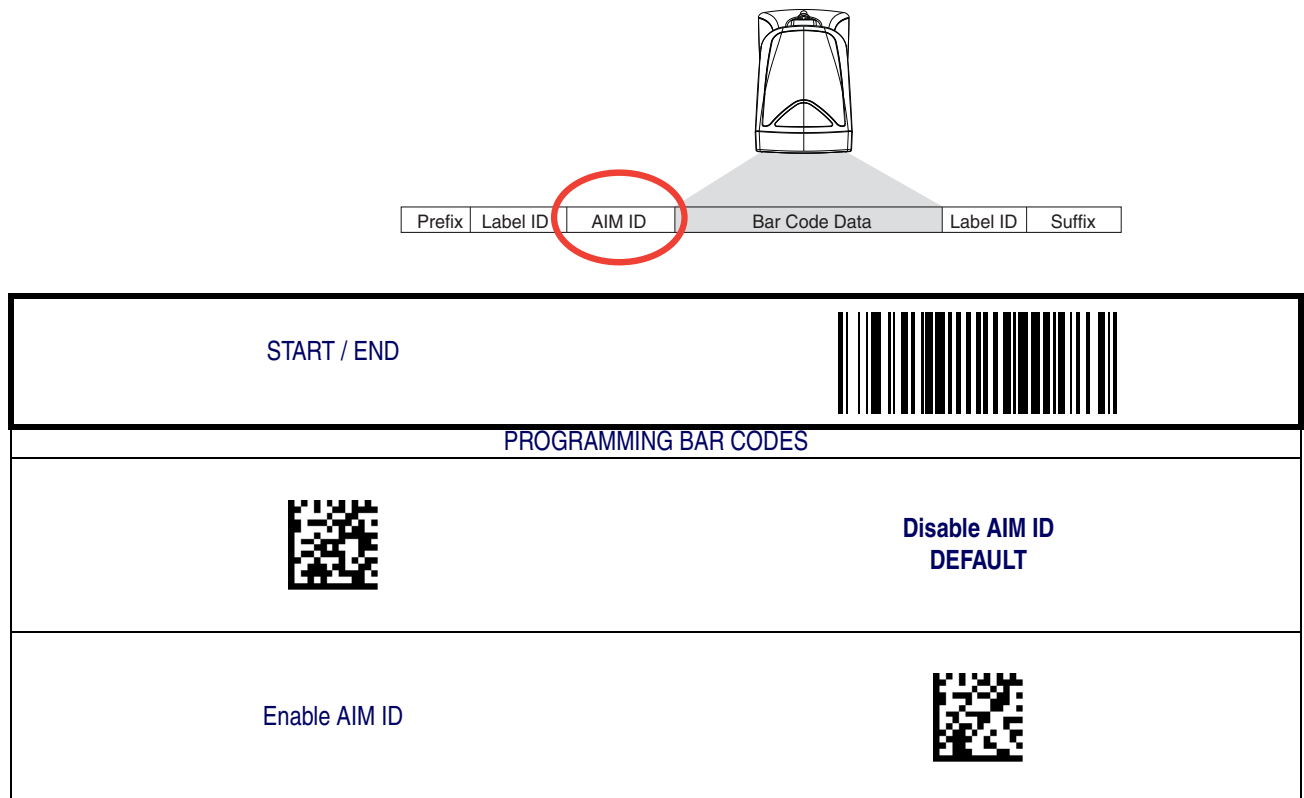

AIM (Automatic Identification Manufacturers) label identifiers are assigned from a globally standardized list — as opposed to custom label ID characters you select yourself — and can be included with scanned bar code data. AIM label identifiers consist of three characters as follows:

- A close brace character (ASCII '['), followed by...
- A code character (see the table below), followed by...
- A modifier character (the modifier character is symbol dependent)

Set GS1 DataBar Expanded 2D Composite Label ID Character(s)	 <p>DEFAULT SETTING FOR THIS FEATURE: RX (52340000 hex)</p>

Case Conversion

This feature can convert scanned bar code data to either all lower case (a through z) or all upper case (A through Z) characters.

NOTE

Case conversion affects **ONLY** scanned bar code data, and does not affect Label ID, Prefix, Suffix, or other appended data.

START / END	
PROGRAMMING BAR CODES	
	Disable DEFAULT
Convert to Upper Case	
	Convert to Lower Case

Character Conversion

Character conversion is an eight byte configuration item. The eight bytes are 4 character pairs represented in hexadecimal ASCII values. The first character in the pair is the character that will be converted. The second character in the pair is the character to convert to. If the character to convert in a pair is **FE**, then no conversion is done.

For example, if you have the character conversion configuration item set to the following:

41423132FFFFFFFF

The first pair is **4142** or AB (**41** hex is an ASCII capital A, **42** hex is an ASCII capital B) and the second pair is **3132** or 12 (**31** hex is an ASCII 1, **32** is an ASCII 2). The other two pairs are **FFFF** and **FFFF**.

With the label, AG15TA81, it would look as follows after the character conversion:

BG25TB82.

The A characters were converted to the B character and the 1 characters were converted to the numeral 2 character. Nothing is done with the last two character pairs, since they are all **FE**.

To set Character Conversion:

1. Scan the START/END bar code.
2. Scan the Character Conversion bar code.
3. Determine the desired string. Up to sixteen positions can be determined as in the above example. Next, turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits needed to fulfill the string.

The positions not used must be filled with the character 'F'.

NOTE

4. Turn to [Appendix C, Alphanumeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step. When the last character is scanned, the scanner will sound a triple beep.
5. Scan the START/END bar code to exit Programming Mode.

START / END	
PROGRAMMING BAR CODES	
	Character Conversion
DEFAULT SETTING FOR THIS FEATURE: FFFFFFFFFFFFFFFF hex (no conversion)	

NOTES

Chapter 5

Symbologies

The scanner supports the following symbologies (bar code types). Options for each symbology are included in this chapter.

- UPC-A
- UPC-E
- EAN-13
- EAN-8/JAN-8
- GS1 DataBar Omnidirectional / Stacked Omnidirectional
- GS1 DataBar Expanded / Expanded Stacked
- GS1 DataBar Limited
- Code 39
- Code 32 Italian Pharmacode
- Code 128
- Interleaved 2 of 5
- Codabar
- Code 93
- MSI/Plessey
- Standard 2 of 5
- Code 11

Factory Defaults— for the standard RS-232 interface are indicated in bold text throughout this section. Reference [Appendix D, Default Settings](#) for default exceptions for your interface.

UPC-A

Disable/Enable UPC-A

When disabled, the scanner will not read UPC-A bar codes.

START / END	
PROGRAMMING BAR CODES	
	Disable UPC-A
Enable UPC-A DEFAULT	

UPC-A — continued

Check Digit Transmission

Enable this option to transmit the check digit along with UPC-A bar code data.

START / END	
PROGRAMMING BAR CODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

Expand UPC-A to EAN-13

Expands UPC-A data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING BAR CODES	
	Don't Expand to EAN-13 DEFAULT
Expand to EAN-13	

UPC-A — continued

Number System Digit (NSD) Transmission

This feature enables/disables transmission of UPC-A System Number.

START / END	
PROGRAMMING BAR CODES	
	Disable Number System Digit Transmission
Enable Number System Digit Transmission DEFAULT	

UPC-A Minimum Reads

This feature specifies the minimum number of consecutive times a UPC-A label must be decoded before it is accepted as a good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads

UPC-E

The following options apply to the UPC-E symbology.

Disable/Enable UPC-E

When disabled, the scanner will not read UPC-E bar codes.

START / END	
PROGRAMMING BAR CODES	
	Disable UPC-E
Enable UPC-E DEFAULT	

Check Digit Transmission

Enable this option to transmit the check digit along with UPC-E bar code data.

START / END	
PROGRAMMING BAR CODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

UPC-E — continued

Number System Digit

The Number System Digit (NSD) which is always a zero (0) in the leading position can be optionally included (or not) with scanned bar code data.

START / END	
PROGRAMMING BAR CODES	
	Exclude Number System Digit
Include Number System Digit DEFAULT	

Expand to UPC-E to UPC-A

Enables/disables expansion of UPC-E labels to UPC-A. Selecting this feature also changes the symbology ID to match those required for UPC-A.

START / END	
PROGRAMMING BAR CODES	
	Don't Expand UPC-E to UPC-A DEFAULT
Expand UPC-E to UPC-A	

UPC-E — continued

Expand UPC-E to EAN13

Enables/disables expansion of UPC-E labels to EAN-13. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING BAR CODES	
	Don't Expand UPC-E to EAN-13 DEFAULT
Expand UPC-E to EAN-13	

Minimum Reads

This feature specifies the minimum number of consecutive times a UPC-E label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read
Minimum = 2 Reads DEFAULT	
	Minimum = 3 Reads
Minimum = 4 Reads	

GTIN

The following options apply to the GTIN label data format.

Expand UPC/EAN to GTIN

Enables conversion of UPC-E, UPC-A, EAN8, and EAN13 labels into 14 character GTIN. If add-on information is present on the base label prior to the conversion taking place, the add-on information will be appended to the converted GTIN label.

START / END	
PROGRAMMING BAR CODES	
	Don't Expand to GTIN DEFAULT
Expand to GTIN	

EAN-13

The following options apply to the EAN-13 symbology.

Disable/Enable EAN-13

Enables/disables ability of scanner to decode EAN/JAN13 labels.

START / END	
PROGRAMMING BAR CODES	
	Disable EAN-13
Enable EAN-13 DEFAULT	

Check Digit Transmission

Enable this option to transmit the check digit along with EAN-13 bar code data.

START / END	
PROGRAMMING BAR CODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

EAN-13 — continued

EAN-13 Flag 1 Character

Enables/disables transmission of an EAN/JAN13 Flag1 character.

START / END	
PROGRAMMING BAR CODES	
	Don't Transmit EAN-13 Flag 1 Char
Transmit EAN-13 Flag 1 Char DEFAULT	

ISBN

When enabled, this feature truncates the leading three digits from labels that contain ISBN (International Standard Book Number) and appends an ISBN check character to the end of the label. These codes are used for books and magazines. Labels with ISBN codes start with "978".

Example:

bar code data: "9789572222720"
 Output: "9572222724"

START / END	
PROGRAMMING BAR CODES	
	Disable ISBN DEFAULT
Enable ISBN	

EAN-13 — continued

Minimum Reads

This feature specifies the minimum number of consecutive times an EAN-13 label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

EAN-8/JAN-8

The following options apply to the EAN-8/JAN-8 symbology.

Disable/Enable EAN-8/JAN-8

Enables/disables ability of scanner to decode EAN/JAN-8 labels.

START / END	
PROGRAMMING BAR CODES	
	Disable EAN-8
Enable EAN-8 DEFAULT	

Check Digit Transmission

Enable this option to transmit the check Digit along with EAN-8/JAN-8 bar code data.

START / END	
PROGRAMMING BAR CODES	
	Don't Send Check Digit
Send Check Digit DEFAULT	

EAN-8/JAN-8 — continued

Expand EAN-8 to EAN-13— Expands EAN-8 data to the EAN-13 data format. Selecting this feature also changes the symbology ID to match those required for EAN-13.

START / END	
PROGRAMMING BAR CODES	
	Don't Expand to EAN-13 DEFAULT
Expand to EAN-13	

Minimum Reads

This feature specifies the minimum number of consecutive times an EAN-8 label must be decoded before it is accepted as good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

EAN Two-Label

Enables/disables the ability of the scanner to decode EAN two-label pairs.

START / END	
PROGRAMMING BAR CODES	
	Disable EAN Two-Label
Enable EAN Two-Label	

EAN Two-Label — continued

EAN Two-Label Combined Transmission

Enables/disables the transmitting of an EAN two label pair as one label.

START / END	
PROGRAMMING BAR CODES	
	EAN Two-Label Combined Transmission = Disable DEFAULT
EAN Two-Label Combined Transmission = Enable	

Price Weight Check Digit

Enables/disables calculation and verification of price/weight check digits.

Applies to all UPC-A labels with a number system digit of 2 and EAN/JAN 13 labels with a Flag1 digit of 2

NOTE

Here are the available options for this feature:

- Disable
- Enable 4-digit price/wt check-digit calculation
- Enable 5-digit price/wt check-digit calculation
- Enable European 4-digit price-weight check-digit calculation
- Enable European 5-digit price-weight check-digit calculation

START / END	
PROGRAMMING BAR CODES	
	Price Weight Check Digit = Disable DEFAULT
Price Weight Check Digit = Enable 4-digit price/wt	
	Price Weight Check Digit = Enable 5-digit price/wt
Price Weight Check Digit = Enable European 4-digit price/wt	
	Price Weight Check Digit = Enable European 5-digit price/wt

Add-ons

Add-ons (or supplemental characters) are commonly added to the end of UPC/EAN bar codes. The scanner will read the add-ons if they are enabled and in the field of view. Three add-on types are supported: 2-digit, 5-digit and Code 128 add-ons. Supported options are:

None— This option directs the scanner to ignore add-on portion of a UPC/EAN bar code but still read the main portion of the bar code.

2 Digits— The scanner will optionally read 2-digit add-ons with the UPC/EAN label.

5 Digits— The scanner will optionally read 5-digit add-ons with the UPC/EAN label.

Code 128 Add-on— The scanner will optionally read Code 128 add-ons with the UPC/EAN label.

NOTE

Contact Customer Support for advanced programming of optional and conditional add-ons.

Add-ons — continued

START / END	
PROGRAMMING BAR CODES	
	Disable Optional 2-Digit Add-ons DEFAULT
Enable Optional 2-Digit Add-ons	
	Disable Optional 5-Digit Add-ons DEFAULT
Enable Optional 5-Digit Add-ons	
	Disable Optional Code 128 Add-ons DEFAULT
Enable Optional Code 128 Add-ons	

NOTE

If a UPC/EAN base label and a P2 add-on are both decoded, the scanner will transmit the base label and add-on. If a UPC/EAN base label is decoded without an add-on, the base label will be transmitted without an add-on.

Please note that conditional add-ons settings are considered by the scanner before optional add-on settings.

Add-ons — continued

2-Digit Addons Minimum Reads

This setting configures the minimum number of times a 2-digit addon must decode before it is marked valid.

START / END	
PROGRAMMING BAR CODES	
Minimum = 2 Reads DEFAULT

PROGRAMMING BAR CODES	
	Start/Stop Type: ABCD/TN*E
Start/Stop Type: ABCD/ABCD	
	Start/Stop Type: abcd/tn*e
Start/Stop Type: abcd/abcd DEFAULT	

Codabar — continued

Start/Stop Character Transmission

The transmission of start and end characters of Codabar is selected below.

START / END	
PROGRAMMING BAR CODES	
	Disable Start/Stop Char Transmission
Enable Start/Stop Char Transmission DEFAULT	

Start/Stop Character Match

This feature enables/disables the requirement that start and stop characters match.

START / END	
PROGRAMMING BAR CODES	
	Disable Start/Stop Char Match DEFAULT
Enable Start/Stop Char Match	

Codabar — continued

Codabar Stitching

Enables/disables stitching for Codabar labels. When parts of a Codabar label are presented to the scanner with this feature enabled, the bar code parts will be assembled by the scanner's software, and the data will be decoded if all bar code proofing requirements are met.

Only functions when Fixed Length Decoding is enabled.

NOTE

START / END	
PROGRAMMING BAR CODES	
	<p>Disable Codabar Stitching DEFAULT</p>
<p>Enable Codabar Stitching</p>	

Codabar — continued

Minimum Reads

This feature specifies the minimum number of consecutive times a Codabar label must be decoded before it is accepted as a good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

Code 93

The following options apply to the Code 93 symbology.

Disable/Enable Code 93

When this feature is disabled, the scanner will not read Code 93 bar codes.

START / END	
PROGRAMMING BAR CODES	
	Disable Code 93 DEFAULT
Enable Code 93	

Code 93 — continued

Length Control

Fixed Length Decoding— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

Variable Length Decoding— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable minimum and maximum length.

START / END	
PROGRAMMING BAR CODES	
	Variable Length Decoding DEFAULT
Fixed Length Decoding	

Code 93 Length 1, Length 2 Programming Instructions

See [page 156](#) for detailed instructions on setting this feature.

NOTE

For Code 93 bar codes, only the data characters are included in the length calculations.

START / END	
PROGRAMMING BAR CODES	
	Set Length 1 DEFAULT SETTING FOR THIS FEATURE: 01
Set Length 2	 DEFAULT SETTING FOR THIS FEATURE: 50

Code 93 — continued

Code 93 Stitching

Enables/disables stitching for Code 93 bar codes. When parts of a Code 93 label are presented to the scanner with this feature enabled, the bar code parts will be assembled by the scanner's software, and the data will be decoded if all bar code proofing requirements are met.

START / END	
PROGRAMMING BAR CODES	
	Disable Code 93 Stitching
Enable Code 93 Stitching DEFAULT	

Minimum Reads

This feature specifies the minimum number of consecutive times a Code 93 label must be decoded before it is accepted as a good read.

START / END	
PROGRAMMING BAR CODES	
	Minimum = 1 Read DEFAULT
Minimum = 2 Reads	
	Minimum = 3 Reads
Minimum = 4 Reads	

MSI/Plessey

The following options apply to the MSI/Plessey symbology.

Disable/Enable MSI/Plessey

When this feature is disabled, the scanner will not read MSI/Plessey bar codes.

START / END	
PROGRAMMING BAR CODES	
	Disable MSI/Plessey DEFAULT
Enable MSI/Plessey	

Check Digit Verification

This feature specifies whether one or two check digits are to be calculated and verified. When disabled, any check characters in a label are treated as data characters.

START / END	
PROGRAMMING BAR CODES	
	Disable Check Digit Verification
Enable Check Digit Verification DEFAULT	

MSI/Plessey — continued

Check Digit Transmit

When this option is enabled, the scanner will transmit one-digit or two-digit check digits, depending upon the setting for check digit verification. Applies when the feature [Check Digit Verification](#) on page 115 is enabled.

START / END	
PROGRAMMING BAR CODES	
	Disable Check Digit Transmission
Enable Check Digit Transmission DEFAULT	

Number of Check Characters

Specifies number of MSI/Plessey check characters to be calculated and verified. Check characters are always modulus 10.

START / END	
PROGRAMMING BAR CODES	
	1 Check Character DEFAULT
2 Check Characters	

MSI/Plessey — continued

Length Control

Fixed Length Decoding— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

Variable Length Decoding— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable minimum and maximum length.

START / END	
PROGRAMMING BAR CODES	
	Variable Length Decoding DEFAULT
Fixed Length Decoding	

MSI/Plessey Length 1, Length 2 Programming Instructions

See [page 156](#) for detailed instructions on setting this feature.

For MSI/Plessey bar codes, all check and data characters are included in the length calculations.

NOTE

START / END	
PROGRAMMING BAR CODES

Chapter 6

2D Symbologies

The features in this section are available **ONLY** for models with 2D features activated.

NOTE

2D Symbologies

The scanner supports the 2D symbologies (bar code types) listed below. Available options for each 2D symbology are included in this chapter.

- PDF 417
- Micro PDF 417
- Datamatrix
- QR Code
- QR Code
- Maxicode
- Aztec
- Composite Labels

PDF 417

Disable/Enable PDF 417

When disabled, the scanner will not read PDF 417 bar codes.

START / END	
PROGRAMMING BAR CODES	
	Disable PDF 417

 DEFAULT SETTING FOR THIS FEATURE: 0001	Set Length 1
Set Length 2	 DEFAULT SETTING FOR THIS FEATURE: 2710

Composite Labels

Disable/Enable GS1 DataBar Omnidirectional 2D Component

When enabled, if a GS1 DataBar Omnidirectional label is decoded which has the 2D linkage flag set, the 2D component must also be decoded or the base label will be discarded.

When disabled, only the GS1 DataBar Omnidirectional base label will be decoded and transmitted regardless of the state of the linkage flag.

START / END	
PROGRAMMING BAR CODES	
	Disable GS1 DataBar Omnidirectional 2D Component DEFAULT
Enable GS1 DataBar Omnidirectional 2D Component	

Disable/Enable GS1 DataBar Expanded 2D Component

When enabled, if a GS1 DataBar Expanded label is decoded which has the 2D linkage flag set, the 2D component must also be decoded or the base label will be discarded.

When disabled, only the GS1 DataBar Expanded base label will be decoded and transmitted regardless of the state of the linkage flag.

START / END	
PROGRAMMING BAR CODES	
	Disable GS1 DataBar Expanded 2D Component DEFAULT
Enable GS1 DataBar Expanded 2D Component	

Disable/Enable GS1 DataBar Limited 2D Component

When enabled, if a GS1 DataBar Limited label is decoded which has the 2D linkage flag set, the 2D component must also be decoded or the base label will be discarded.

When disabled, only the GS1 DataBar Limited base label will be decoded and transmitted regardless of the state of the linkage flag.

START / END	
PROGRAMMING BAR CODES	
	Disable GS1 DataBar Limited 2D Component DEFAULT
Enable GS1 DataBar Limited 2D Component	

NOTES

Advanced Decoding Features

Pharmacy Patterns

Enables/disables using the pharmacy patterns.

START / END	
PROGRAMMING BAR CODES	
	Pharmacy Patterns = Disable DEFAULT
Pharmacy Patterns = Enable	

NOTE

Pharmacy patterns are VSL (1D) patterns that are almost exclusively in the fence orientation. This loses almost all omni capability, but gains a much denser fence pattern and gives a much better ability to read highly truncated and small 1D bar codes.

Inverse Label Reading

This controls the method of reading inverse labels (white label on black background).

This feature is only available for GS1 DataBar and 2D symbologies.

NOTE

START / END	
PROGRAMMING BAR CODES	
	2D Read Mode = Reads only normal labels DEFAULT
2D Read Mode = Reads both normal and inverse labels	
	2D Read Mode = Reads only inverse labels

Chapter 8

References

This section contains explanations and examples of selected bar code features. See the programming sections for the actual bar code labels used to configure the reader.

Global Prefix/Suffix

Up to 20 ASCII characters may be added as a prefix (in a position before the bar code data) and/or as a suffix (in a position following the bar code data) as indicated in Figure 7.

Figure 7. Prefix and Suffix Positions

Example: Setting a Prefix

In this example, we'll set a prefix for all symbologies.

1. Determine which ASCII character(s) are to be added to scanned bar code data. In this example, we'll add a dollar sign ('\$') as a prefix.
2. Scan the START bar code.
3. Scan the SET PREFIX bar code.
4. Reference the [ASCII Chart](#) on the inside back cover of this manual, to find the hex value assigned to the desired character. The corresponding hex number for the '\$' character is 24. To enter this selection code, scan the '2' and '4' bar codes from [Appendix C, Alphanumeric Pad](#).
5. Scan the END bar code once to finish the string, then scan END again to exit Programming Mode.

If all 20 characters will be used in the prefix or suffix, do not scan the END bar code to finish the string. It is done automatically.

NOTE

6. The resulting message string would appear as follows:

Scanned bar code data:12345

Resulting message string output: \$12345

Label ID

A Label ID is used to identify a bar code (symbology) type. See [Appendix D, Default Settings](#), for a listing for common symbologies. It can be appended previous to or following the transmitted bar code data depending upon how this option is enabled. This feature provides options for configuring custom Label IDs individually per symbology. If you wish to program the scanner to always include an industry standard label identifier for ALL symbology types, see the feature, [AIM ID](#).

The Label ID is a customizable code of up to three ASCII characters (each of which are 00-7F) followed by a control character (00-01). This control character, when set to zero, does nothing. When set to one, it appends the symbology's AIM ID to the Label ID.

When the control character is set to 01 for UPC-A and UPC-E, it expands the label to EAN-13 and thus follows the EAN-13 Label ID settings.

NOTE

To configure a Label ID:

1. Scan the START bar code.
2. Select Label ID position as either BEFORE or AFTER by scanning the appropriate bar code.
3. Scan a bar code to select the symbology for which you wish to configure a custom Label ID.
4. Determine the desired character(s) (you may choose up to three) which will represent the Label ID for the selected symbology. Next, turn to the [ASCII Chart](#) on the inside back cover of this manual and find the equivalent hex digits associated with your choice of Label ID. For example, if you wish to select an equal sign (=) as a Label ID, the chart indicates its associated hex characters as 3D.
5. Turn to [Appendix C, Alphanumeric Pad](#) and scan the bar codes representing the hex characters determined in the previous step. For example, to make an equal sign (=), scan '3' and 'D' followed by '0' six times. Since this is a three-character buffer, '00' is scanned for character two, '00' for character three and '00' for the control character. ('00' indicates no character.)
6. Scan the END bar code to exit programming mode.

Figure 8. Label ID Position Options

Length Control

Fixed Length Decoding— When fixed length decoding is enabled, the scanner will decode a bar code if the label length matches one of the configurable fixed lengths.

Variable Length Decoding— When variable length decoding is enabled, the scanner will decode a bar code if the label length falls in the range of the configurable minimum and maximum length.

Configuring Fixed Length Decoding:

1. Scan the START/END bar code.
2. Scan the Fixed Length Decoding bar code for the desired symbology.
3. Scan the START/END bar code.
4. Set Length 1 to the first fixed length by following the [Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second fixed length (or to '00' if there is only one fixed length) by following the [Length 1, Length 2 Programming Instructions](#) below.

Configuring Variable Length Decoding:

1. Scan the START/END bar code.
2. Scan the Variable Length Decoding bar code for the desired symbology.
3. Scan the START/END bar code.
4. Set Length 1 to the first variable length by following the [Length 1, Length 2 Programming Instructions](#) below.
5. Set Length 2 to the second variable length by following the [Length 1, Length 2 Programming Instructions](#) below.

Length 1, Length 2 Programming Instructions

1. Scan the START/END bar code.
2. Scan either the Set Length 1 or Set Length 2 bar code for the desired symbology.
3. Turn to [Appendix C, Alphanumeric Pad](#) and scan the two digits (zero padded) representing the length in decimal notation. The number of characters that can be set varies, depending upon the symbology. Reference the page for your selected symbology to see specific variables.
4. Scan the START/END bar code

Appendix A

Product Specifications

Optical and Read Performance Parameters

Parameter	Specification
Scan Volume	60 cubic inches
Scan Pattern	140 Scan Lines ^a
Scan Rate	~1456 scan lines/second ^a
Minimum Resolution	5 mil
Depth of Field (100% UPC Labels)	0 - 5.5"
Minimum Print Contrast Ratio	25%
Skew (Yaw)	± 60°
Pitch	± 60°
Roll	Between 0 and 360°

^a. These stats decline in Pharmacy Mode.

Scanner Dimensions

Physical Properties

Parameter	Specification
Dimensions (Scanner w/Base Station):	76mm x 151mm x 109.1mm
Weight	10.5 oz.

Electrical Parameters

Parameter	Specification
Operating Voltage	Input voltage 4.5 to 5.5 VDC
Input Current	
Operating (idle)	<350mA
Operating (label read)	<400 mA

Environmental Parameters

Parameter	Specification
Mechanical Shock	Multi 1.2m drops
Contaminants	
Water and Dust	IP52
Temperature Ranges:	
Operating	32° F to +104° F (0° C to +40° C)
Storage	-40° F to +158° F (-40° C to + 70°C)
Ambient Light Indoor	0 - 6000 lux
Ambient Light Outdoor	0 - 86,100 lux
Humidity	5 to 95% non-condensing
Beeper/Speaker	70-85dBA at a distance of 3'-3" (1 meter)
Vibration	Retail/Office

Other Parameters

Parameter	Specification
EAS Support	YES (Checkpoint)

Default Settings

Defaults by Symbology

The following is a partial list of key settings for each symbology type.

Code Type	Read Enable	Checksum Verification Enable	Checksum Transmission Enable	Label ID
UPC-A	✓	✓	✓	A
UPC-E	✓	✓	✓	E
EAN-13	✓	✓	✓	F
EAN-8	✓	✓	✓	FF
GS1 DataBar Omnidirectional				R4
GS1 Expanded				RX
Code 39	✓		✓	*
PharmaCode 39				A
Code 128	✓			#
Interleaved 2 of 5			✓	i
Codabar			✓	%
Code 93				&
MSI/Plessey			✓	@
Standard 2 of 5			✓	s
PDF 417				P
Micro PDF 417	✓			mP
Datamatrix				Dm
QR Code				QR
Maxicode				MC
Aztec				Az
GS1 DataBar Omnidirectional 2D Composite				R4
GS1 DataBar Expanded 2D Composite				RX
GS1 DataBar Limited 2D Composite				RL

Interface Default Exceptions

The factory default settings indicated in the programming sections (in bold text) reflect factory configuration for the RS-232 standard interface. The following tables list default exceptions by interface for the remaining available interfaces.

RS-232 Wincor/Nixdorf

Parameter	Default Setting
Interface Type	RS-232-WN
Number of Host Transmit Buffers	One Buffer
RS-232 Parity	Odd
RS-232 Hardware Control	CTS Flow Control
UCC/EAN-128 Label ID	'P'
Code 39 Label ID	'M'
Code 93 Label ID	'L'
Code 128 Label ID	'K'
Codabar Label ID	'N'
EAN-8 Label ID	'B'
EAN-13 Label ID	'A'
ISBN Label ID	'A'
Interleaved 2 of 5 Label ID	'I'
Standard 2 of 5 Label ID	'H'
MSI/Plessey Label ID	'O'
UPC-E Label ID	'C'
GS1 DataBar Omnidirectional Label ID	'E'
GS1 Expanded Label ID	'E'

USB Keyboards

Parameter	Default Setting
Label ID Transmission	Disable

Appendix E

USB Keyboard Function Key Mappings

Table 1. USB Function Key Usage Map

ASCII	Key value	Usage Name	Modifier/ Scancode
00	NUL	ALT right Make	40h 00h
01	SOH	ALT right Break	00h 00h
02	STX	F11	00h 44h
03	ETX	F12	00h 45h
04	EOT	GUI right Make	80h 00h
05	ENQ	GUI right Break	00h 00h
06	ACK	CTRL right Make	10h 00h
07	BEL	CTRL right Break	00h 00h

Host Commands

Host Commands Supported by RS-232 and USB COM Interfaces

The scanner responds to the following host commands:

COMMAND	ASCII	HEX	COMMENT
Enable Scanner	E	0x45	“Normal operating mode”
Disable Scanner	D	0x44	“Illumination disabled and Green LED Flashing”
Reset Scanner	R	0x52	“Scanner resets and emits a single beep.”
Not On FileIndication	F	0x46	“Illumination disabled, scanner emits 3 beeps. Must send the E command to re-enable scanner.”
Beep Good Read Tone	B	0x42	Beeps if Good Read Beep is enabled
Force Good Read Tone	{SOH}	0x01	Beeps regardless of beep setting
Identification request	i	0x69	“Scanner transmits information data string” ^a
Health request	h	0x68	“Scanner transmits information data string” ^a
Status request	s	0x73	“Scanner transmits information data string” ^a
Cell Phone Mode Enable Host P<count>C Where:			
	ASCII	HEX	
P is an ASCII “P” character	‘P’	0x50	
<count> is the binary value of 0x01			
C is an ASCII “C” character	‘C’	0x43	
Image Capture <P><lx04><p><S><C> Where:			
	ASCII	HEX	
<P>: Host Command Preamble Character	‘P’	0x50	
0x04: Byte Count. (Fixed Value).		0x04	
<p>: Image Capture Command Character	‘p’	0x70	
<S>: Size (640x480 only)	‘S’	0x53	
: Brightness.	‘B’ or ‘0’ (min) - ‘9’ (max)	0x42 or 0x30 - 0x39	Where ‘B’ = Scanner Configuration Value.

COMMAND	ASCII	HEX	COMMENT
<C>: Contrast	'C' or '0' (min) - '9' (max)	0x42 or 0x30 - 0x39	Where 'C' = Scanner configuration Value. Refer to the "Image Capture" section on page 20 for more information on image capturing features and settings.

^a. Call Tech Support for information.

If one of the above commands is received, the scanner will perform the steps indicated for the command. Additional host commands are available. Contact Tech Support for more details.
